

INDUSTRIAL HOSE MANUFACTURING LIMITED

Ceramic Lined Rubber Hose

Premier engineered a different approach to this specialized product, a ceramic-lined hose that uses ceramic beads instead of tiles; the hose is lined with ceramic beads vulcanized to a high abrasion resistant rubber compound. This ensures exceptional wear and impact resistance without sacrificing flexibility and offering an extended service life. This approach also allows preshaped special forms (such as elbows or "T" joints, among others) to be ceramic lined. For a superior investment in value and productivity, ceramic lined hose is the perfect choice for severe applications.

CUSTOMIZATION

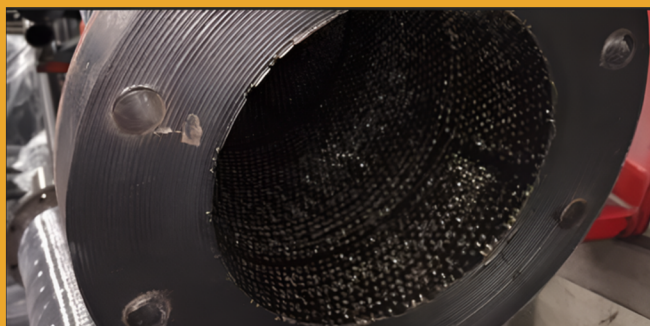

- Hose can be protected from high temperature with silicone, fiberglass, Nomex, or Pyrotape
- Wide range of sizes and lengths, up to 50 feet
- Hose cover can be corrugated to fit standard aluminum split flanges
- Other types of ends available.

APPLICATIONS

- Carbon injection
- Mines and quarries
- Power generation
- Steel works
- Manufacturing or processing of insulation materials
- Ceramic and glass works
- Any application utilizing rubber hose to transport abrasive powders (ceramic, coal, dry cement, etc.) or materials (fly ashes, waste)

BENEFITS AS COMPARED TO TRADITIONAL MATERIAL HANDLING HOSE

- Long lasting resistance to highly abrasive materials
- Reduced need for service and/or replacement
- Bend radius equal to a standard reinforced hose product
